

# Linking Tabular Data to Geospatial Data

*This tutorial is part of an educational series produced by members of the [Big Ten Academic Alliance Geospatial Information Network](#).*

Prepared by: Wenjie Wang, GIS Specialist, University of Illinois at Urbana-Champaign  
([wenjiew@illinois.edu](mailto:wenjiew@illinois.edu)).

These slides and the accompanying activities are licensed under a [Creative Commons Attribution 4.0 International](#) license.

## Introduction

This tutorial gives an example to help students understand GIS technology allows people to connect data with geography. GIS can relate unrelated information by using location as the key index variable. Sometimes people don't fully understand their data until they see how it relates to other things in a geographic context. And GIS can help people understand what belongs where.

Through this tutorial, student can get familiar with how to link tabular data to geospatial data by using ArcGIS Online. Instructors can add more exercises based on students' need.

## Download Data

Geospatial Data is the data about a object that has a geographic component.

The [Big Ten Academic Alliance Geoportal](#) connects users to digital geospatial resources, including GIS datasets, web services, and digitized historical maps from multiple data clearinghouses and library catalogs. The site is solely a search tool and does not host any data.

Visit the Project [Documentation](#) page to find out more about our project's history, committees, working groups, conference presentations, and journal articles.

The following steps show how to find geospatial data from BTAA geoportal and tabular data from U.S. Census:

1. Search the keywords "county boundary of Wisconsin" through BTAA geoportal
2. Open the first result "County Boundaries, Wisconsin 2015"
3. Click the "Original Shapefile" button to download the data. Save as "WI\_Counties\_2015.zip"

This polygon feature class represents boundaries of the 72 counties in Wisconsin. The data is derived from 1:24,000-scale sources. This feature class was last updated in June 2015.

## County Boundaries, Wisconsin 2015

**Creator:** Wisconsin Department of Natural Resources

**Description:** This polygon feature class represents boundaries of the 72 counties in Wisconsin. The data is derived from 1:24,000-scale sources. This feature class was last updated in June 2015; refer to the Data Lineage section of the ArcGIS metadata for information about the nature of the update. For more information, contact the WI DNR Bureau of Technology Services.

**Place:** [Wisconsin](#)

**Subjects:** [Location](#), [Boundaries](#), and [Society](#)

**Type:** [Dataset](#)

**Temporal Coverage:** 2015

**Contributed by:** [Wisconsin](#)

### *Polygon Feature Class for Wisconsin County Boundaries*

1. Open U.S. Census website (<https://www.census.gov/en.html>) and search the keywords "wisconsin counties by population"
2. Open the first result "County Population Totals: 2010-2019" and click Wisconsin to download the table.

## Tables

### Annual Estimates of the Resident Population for Counties: April 1, 2010 to July 1, 2019

United States	Kansas	North Carolina
Alabama	Kentucky	North Dakota
Alaska	Louisiana	Ohio
Arizona	Maine	Oklahoma
Arkansas	Maryland	Oregon
California	Massachusetts	Pennsylvania
Colorado	Michigan	Rhode Island
Connecticut	Minnesota	South Carolina
Delaware	Mississippi	South Dakota
District of Columbia	Missouri	Tennessee
Florida	Montana	Texas
Georgia	Nebraska	Utah
Hawaii	Nevada	Vermont
Idaho	New Hampshire	Virginia
Illinois	New Jersey	Washington
Indiana	New Mexico	West Virginia
Iowa	New York	Wisconsin
		Wyoming

*Annual Estimates of the Resident Population for Counties in Wisconsin: April 1, 2010 to July 1, 2019 (CO-EST2019-ANNRES-55), U.S. Census Bureau, Population Division, March 2020*

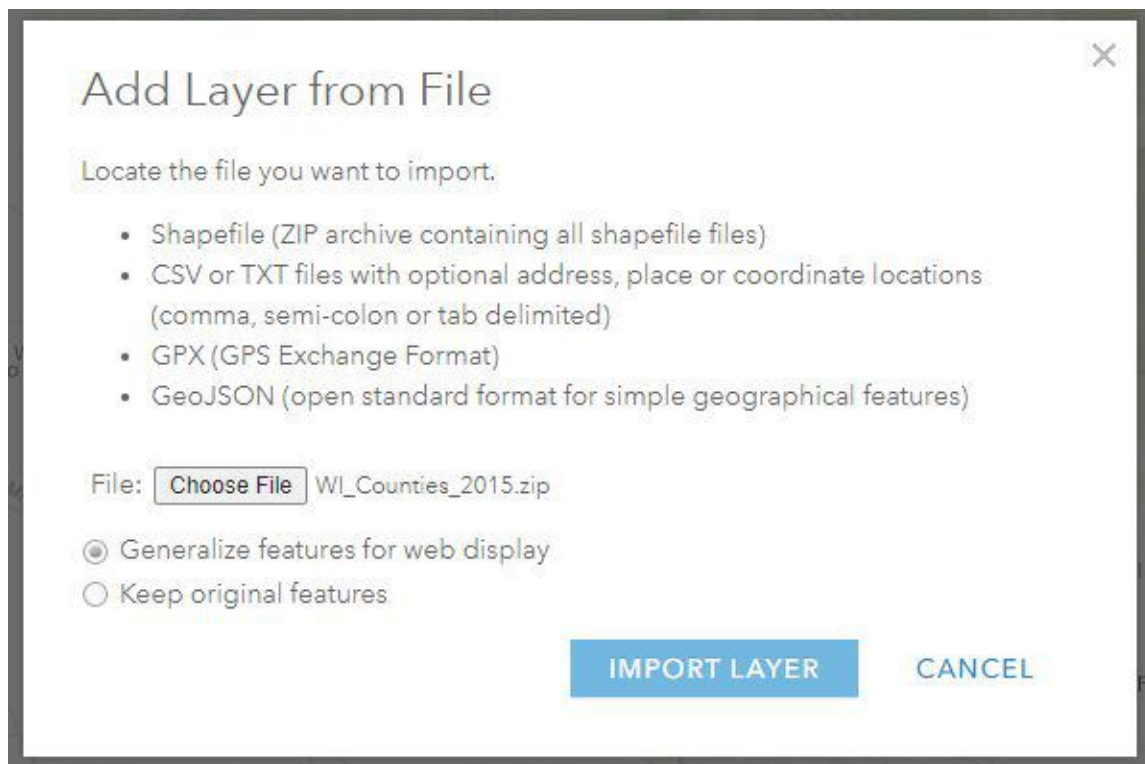

## Prepare Data

1. Log into ArcGIS Online and create Web Map

*Adding a Layer in ArcGIS Online*

1. Add WI\_Counties\_2015.zip as a new layer from File

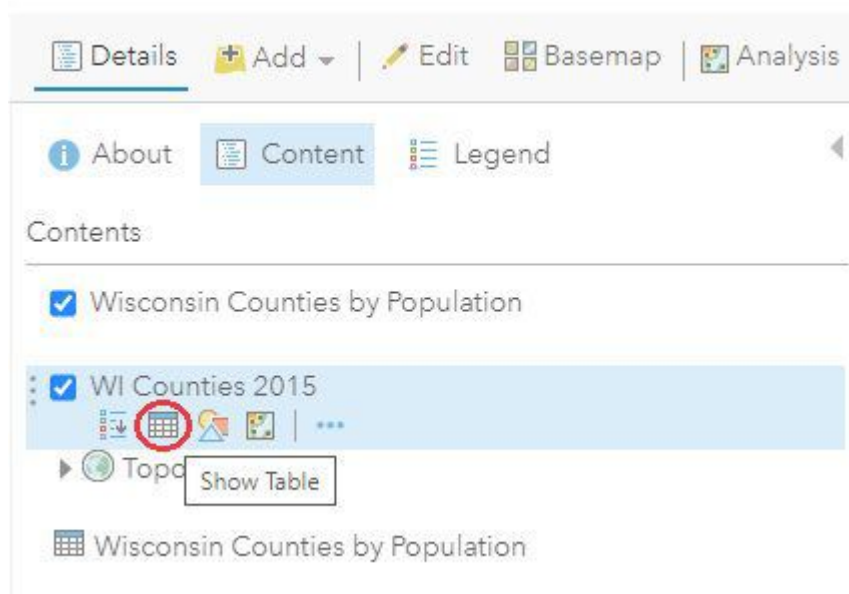

*Choosing a File in ArcGIS Online*

1. Choose an attribute to show. Here we use “show location only”

### *Choosing an Attribute to Show in ArcGIS Online*

1. Click “show table” button to open attribute table and get to know what information was included in the geospatial dataset.

### *Show Table in ArcGIS Online*

### Attribute Table in ArcGIS Online

1. Create a new excel file and name it as "Wisconsin Counties by Population.csv". Copy and paste the county name column and population in 2019 column from U.S. Census spreadsheet into this new excel file. We need to use county name as the common field to link those two tables. Therefore, the name of counties in both table should be the same.

Notice: paste the values only and revise the name of counties by using replace tool.

Table from U.S. Census

	A	B	C	D	E	F	G	H	I	J	K	L	M
2	Annual Estimates of the Resident Population for Counties in Wisconsin: April 1, 2010 to July 1, 2019												
3	Geographic Area	April 1, 2010		Population Estimate (as of July 1)									
4		Census	Estimates Base	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
5	Wisconsin	5,686,986	5,687,285	5,690,475	5,705,288	5,719,960	5,736,754	5,751,525	5,760,940	5,772,628	5,790,186	5,807,406	5,822,434
6	Adams County, Wisconsin	20,875	20,867	20,878	20,769	20,417	20,413	20,125	20,028	19,982	19,900	20,341	20,220
7	Ashland County, Wisconsin	16,157	16,157	16,143	16,029	15,838	15,970	15,995	15,804	15,633	15,501	15,587	15,562
8	Barron County, Wisconsin	45,870	45,873	45,814	45,890	45,777	45,581	45,349	45,367	45,242	45,141	45,150	45,244
9	Bayfield County, Wisconsin	15,014	15,008	15,000	15,059	15,057	15,113	14,973	14,976	14,923	15,006	15,026	15,036
10	Brown County, Wisconsin	248,007	248,003	248,476	250,481	252,682	254,211	256,202	257,856	259,514	261,762	263,165	264,542

### Shared Attribute Between Two Tables

1. Add the "Wisconsin Counties by Population.csv" as a new layer and choose "None, add as table"

*Add Layer from File*

*Add CSV*

## Data Process

The following steps show how to link tabular data to the geospatial data:

1. Click Analysis and choose Join Features

### *Joining Features*

1. Choose WI\_Counties\_2015 as the “Target Layer” and Wisconsin Counties by Population as the “Layer to Join to the Target Layer”.
2. Choose the “COUNTY\_Nam” and “County” as the fields to match.
3. Choose a one-to-one join operation and name the result layer as Wisconsin Counties by Population.

# Join Features

---

1
Choose target layer

WI\_Counties\_2015

2
Choose layer to join to target layer

Wisconsin Counties by Population

3
Select the type(s) of join

Choose a spatial relationship

Choose the fields to match

COUNTY\_...
=
County

Target field
=
Join field

4
Choose join operation

Join one to one

Define which record is kept

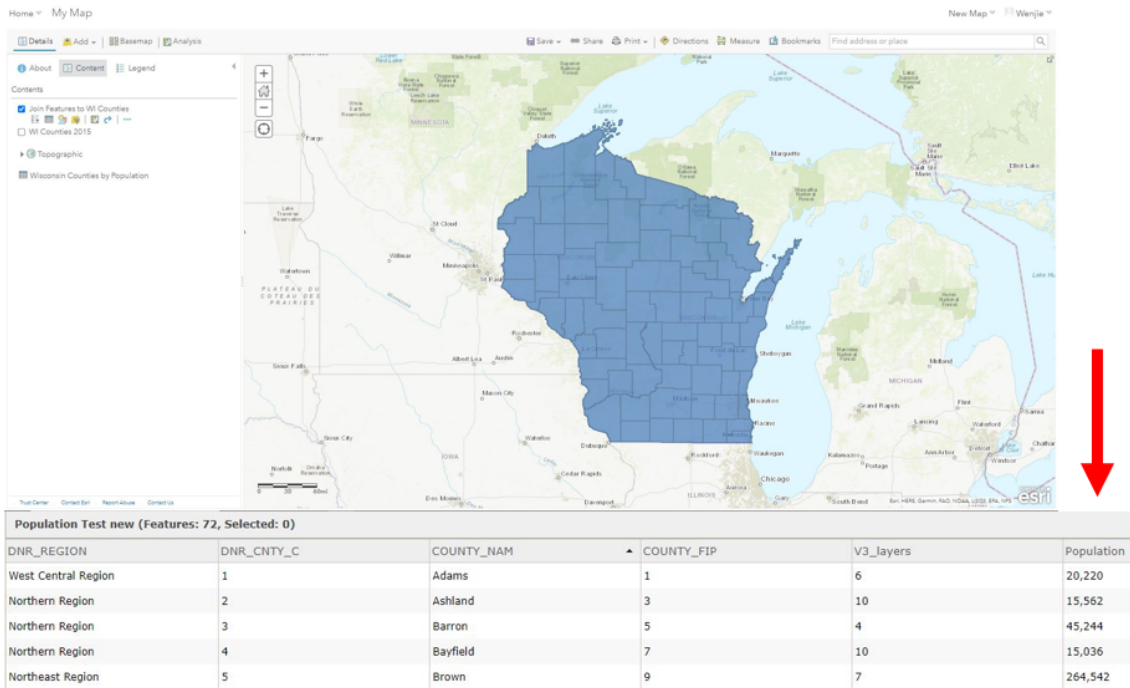

☒ First record (default)
☐ Order by

Field
Sort By

☒ Keep all target features

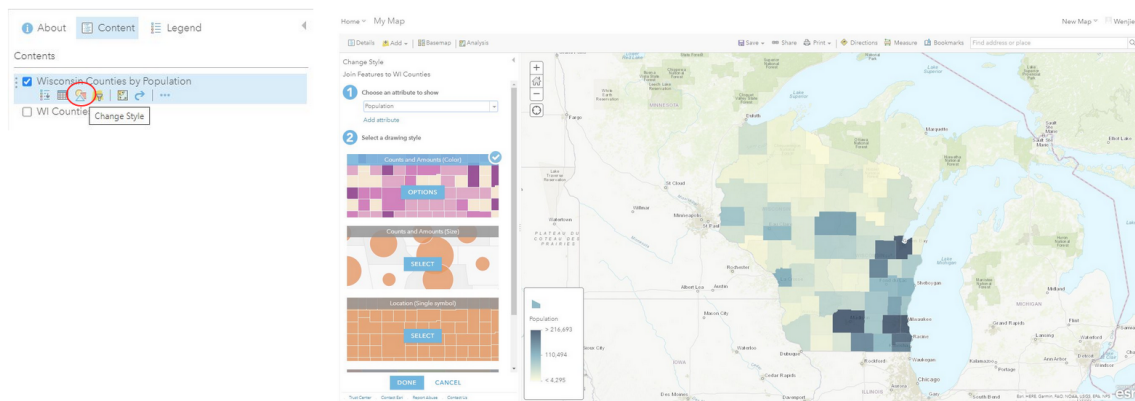

*Join Features Input Form*

1. Click the Run Analysis button, and a new layer based on population will be shown.

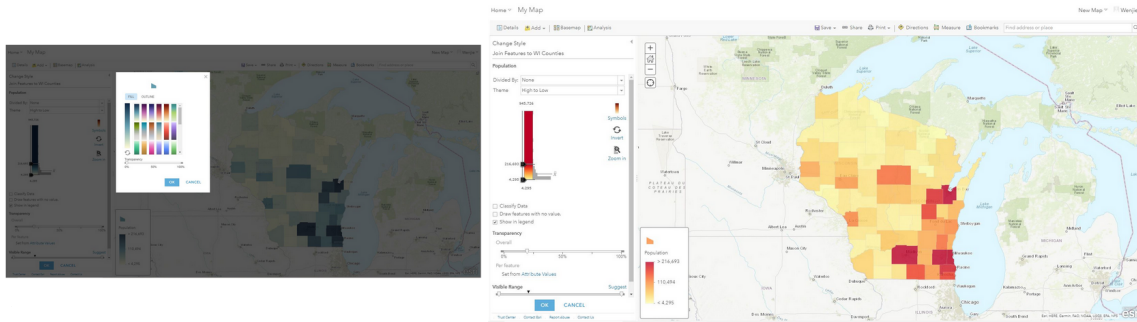

## Join Output

1. Symbolize the Wisconsin Counties by Population layer by clicking “change style” button

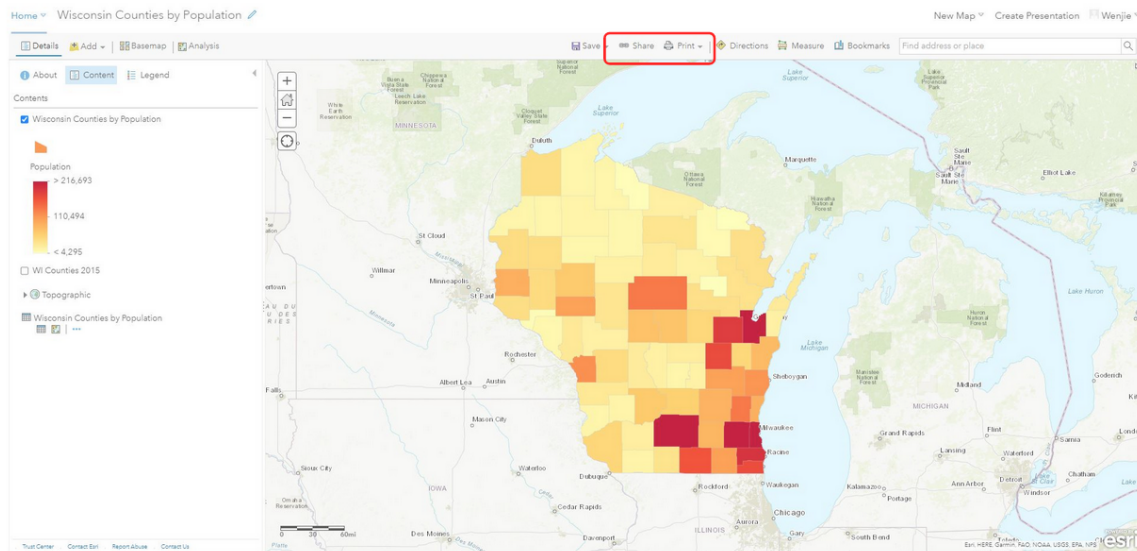

## Change Layer Style

1. Choose the appropriate style to clearly show the population

### *Reset Choropleth Symbology*

1. Share or Print the Wisconsin Counties by Population map
2. For copyright information, refer to the copyright tutorial

### *Share or Print*

## Exercise

### Questions

1. What's the advantage of mapping tabular data?
2. Choose different basemap and use different symbol to create different thematic map.
3. Download a shapefile data related to students' research field and link their tabular data to it.

## Wrapping Up

This tutorial is part of an educational series produced by members of the [Big Ten Academic Alliance Geoportal](#). The BTAA Geoportal connects users to digital geospatial resources, including GIS datasets, web services, and digitized historical maps from multiple data clearinghouses and library catalogs. The site is solely a search tool and does not host any data. To access additional tutorials in this series that cover various other topics, visit: <https://sites.google.com/umn.edu/btaa-gdp/tutorials>.
